

Method-Induced Uncertainty in Gear Bending Fatigue: Factorial Decomposition of Size-and-Surface Factor Sensitivity Under a Common ISO Stress Baseline

Zhilei Chen

Guangdong Peizheng College, Data and Computer Science,
53 Peizheng Rd., Chini Town, Huadu, Guangzhou, Guangdong 510830, China

E-mail: 2604513@peizheng.edu.cn

ORCID: 0009-0000-2798-9566

Corresponding Author: Zhilei Chen

Manuscript type: Original Article

Number of figures: 7

Number of tables: 3

Word count (main text): ~10,000

Supplementary material: Reproducibility package (code + data)

Suggested Reviewers:

1. Prof. Luigi Bonaiti, Politecnico di Milano, Italy.
E-mail: luigi.bonaiti@polimi.it
Expertise: gear fatigue standards, pulsator testing, ISO/AGMA comparison
2. Prof. Lorenzo Pagliari, Free University of Bozen-Bolzano, Italy.
E-mail: lorenzo.pagliari@unibz.it
Expertise: ISO 6336 tooth bending fatigue, experimental validation
3. Prof. Franco Concli, Free University of Bozen-Bolzano, Italy.
E-mail: franco.concli@unibz.it
Expertise: gear fatigue, computational methods, FKM guideline

Conflict of Interest Statement: The author declares no competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

Data Availability Statement: All S–N curve data are from the publicly accessible University of Waterloo SMDIdbase. The complete reproducibility package (code, sweep data, AFT decomposition results, figures) is submitted as supplementary material and will be deposited in Zenodo upon acceptance.

Funding: This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

AI-Assisted Writing Disclosure: Generative AI tools (Claude, Anthropic) were used for grammar refinement, code development, and manuscript formatting. All scientific content, analysis, and conclusions are the sole intellectual contribution of the author.
